(2026) CONSULTANCY SERVICES - RANGE

(*Delivered by leading industry experts in AI)

- **AI Feasibility & ROI Analysis**
- **Staff Training (Courses/Workshops)**
- **Customer Interaction Optimisation**
- **Third Party Consultancy Services**
- **AI Policies & Use Frameworks**
- **Custom Application/Solution Design**

Our Consultancy Services

Our AI Consultancy services are delivered as either:

- Focused engagements with defined outcomes
OR
- Fully integrated AI strategy & implementation programmes tailored to your organisation.

Each engagement is aligned to your: strategic objectives, policies, governance and compliance standards.

The result is to deliver a expert led hands on consultancy solutions which leads to sustainable and measurable AI adoption from Day 1!

AI Feasibility & ROI Consultancy

This service provides a structured evaluation of where AI can deliver measurable operational value prior to: investment or deployment. We work to review real workflows, assess suitability, and determine where & how AI can make a measurable impact.

Through technical assessment and practical demonstration, we clarify both opportunities and limitations, ensuring future decisions are based on evidence and data – mapped specifically to your industry & organisation.

We work with existing structure and staff to showcase practical AI related demonstrations for possible implementable solutions alongside their effective ROI & time saving abilities through industry standard documentation.

Ideal For:

AI ROI

Clearly quantify potential time savings & efficiency improvements to measure cost/Time saving

Reduced Implementation Risk

Delivered by experts trained in the field, to help build trust and garner support for AI related ventures

Practical Understanding for Staff

Prototype demonstrations are industry standard and directly help to showcase the usage of applications in real time to better depict: ease of use and its real world time/cost saving ability.

Key Features:

- Reviews of workflow & operational objectives
- Identification of realistic AI Opportunities
- Technical (Feasibility & Readiness) assessments
- Prototype demonstrations
- Clear guided knowledge delivered from industry experts
- Technical ROI Evaluation (Documents)

Product Category:
Consultancy Services

Product ID:
CON-SRV-001

Staff Courses & Training Workshops

This service provides practical hands on AI training delivered by experienced consultants.

The goal is to simplify the use of AI tools by performing practical and theoretical demonstrations to boost trust and confidence in existing or newly adopted AI tools/applications.

Sessions focus on real business tasks to teach staff how to apply AI tools directly to daily responsibilities such as: writing emails, preparing documents, organising information and making manual repetitive tasks more efficient.

By the end of the workshop, participants will understand AI better, have a deeper level of trust and be in a better position to actively use it as a reliable tool within their role and day-to-day activities safely & securely.

Ideal For:

Organisations who have recently, previously or plan to within the near future deploy AI tools/applications & are looking for clearer guidance and principles on its use

Immediate Productivity Gains

Staff can reduce time spent on routine administrative tasks from the first day post workshop

Safer & More Reliable AI Use

Delivered by experts – deeply familiar with legislation, rules and cyber security ensuring all staff leave with the suitable training to correctly deploy and use 3rd party AI Tools.

Improve Confidence & AI Adoption Protocols

Hands on learning helps employees feel more confident about newer/emerging technology

What we cover (During the course):

- How modern AI tools work in business environments
- Writing effective prompts and instructions
- Drafting emails, documents and structured content
- How to improve daily task efficiency
- Hands on practical demonstrations
- Using 3rd party AI tools safely & effectively
- (Instructor Led – Delivery)

CON-SRV-002

Customer Interaction Optimisation

This service provides a structured evaluation of your current customer interaction, workflow & processes to potentially identify opportunities to improve efficiency, consistency and responsiveness through the use of custom AI tools.

Where appropriate, we develop AI based prototypes such as (quote creation tools or live chat systems) to practically demonstrate how operations can be streamlined in real time.

The outcome of this service is to deliver clear recommendations and solutions that showcase actionable enhancements, to current customer facing process with the aim of improved customer interactions, responses and sentiment.

Ideal For:

Businesses looking to streamline their customer response times and solve more routine queries at a higher effectiveness rate.

Streamlined Workflows

Identifying & eliminating inefficiencies in handling enquiries, requests or repetitive interactions

Improved Customer Experience

Enable faster more consistent and accurate responses across all centralised contact routes

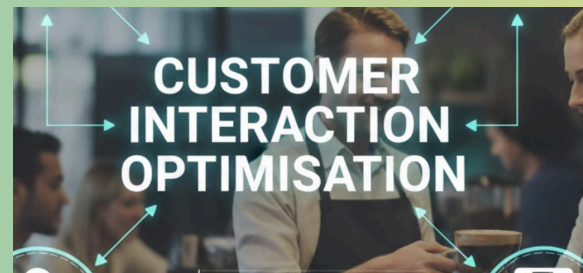

Operational Insights & Analytics

Gain a more detailed understanding of current processes, bottlenecks and future customer related automation opportunities within your industry

What we cover (During the course):

- Clear analysis of current workflow/processes
- Hands on prototype development
- Clear documentation designed for stakeholders
- Evidence based recommendations/ estimated ROI
- Clear roadmap for future automation opportunities
- Workshops for (Sales/Client facing) teams to better understand how AI can help their current clients

Product Category:
Consultancy Services

Product ID:
CON-SRV-003

AI Policy & Responsible Use Frameworks

Built to cater towards organisations looking to establish clear, practical and safe AI policies.

Our consultants work to design frameworks that guide staff on how to use AI responsibly & securely ensuring compliance with:
Ethical, legal, environmental and cyber security standards.

We tailor policies to business context, recommending tools applicable to your data and industry standards. The frameworks are designed by AI experts with industry experience to prevent misuse, and build confidence in long term AI adoption.

The outcome of this service, is to deliver structured policies/documentation that your organisation can implement immediately, to safeguard and support long term AI use effectively within your organisation.

Ideal For:

Businesses looking to promote and establish more clear protocols surrounding prolonged AI use

Safe & Responsible AI Adoption

Helps regulate the safe adoption and use of AI tools within your organisation through a structured process led by industry and AI experts

Cyber Security & Compliance

Directly establishes clear protocol, safety and security rules around the use of AI

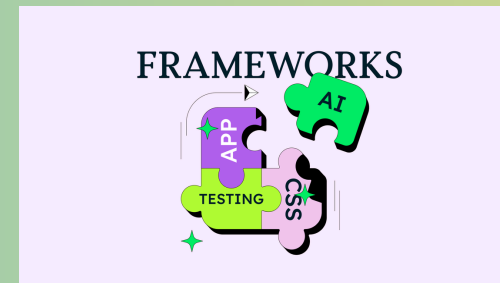

Strategic AI Governance Framework

Provides clear framework for responsible AI use to support current and future operational requirements

What we cover (During the course):

- Guidance on industry standards & adoption process
- Ai Frameworks and use/user guidelines
- Development of AI policies & framework documents
- Recommendations for ongoing governance/review
- Optional follow up audits, updates and maintenance
- Architecture review of current or planned AI Tools

Consultancy Services

Product ID:
CON-SRV-004

Custom AI Application Design

We specialise in the delivery of practical, safe and context specific AI Applications to use within your organisation.

The application will be custom built & unique to your operational requirements, with clear ROI plans, effective support pathways and scope meetings involving a custom application prototype to model the final system.

Alongside application delivery, frameworks and documentation will be delivered to guide staff through application use.

Together these steps, paired with our staff training workshops and 6 months of free post delivery support ensure adoption is smooth, confident and aligned with your organisational and industry standards.

Ideal For:

Businesses looking to create tailored AI applications designed specifically to their workflows, goals or manual repetitive/inefficient tasks.

First time (AI Application Implementation)

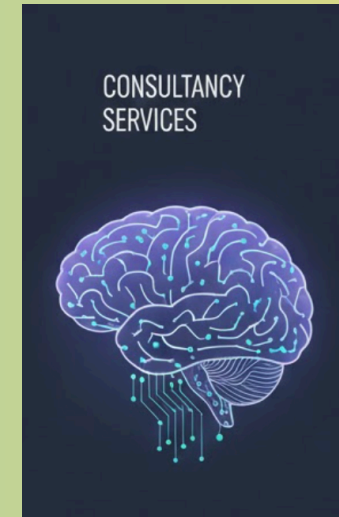

Solutions built with measurable outcomes to track performance and system ROI since rollout.

Ongoing Support & Governance Pathway

We work alongside our customers to work on a intimate support led delivery basis, for every application we deliver a working prototype, and 6 months of (Support & Warranty)

Operational Efficiency Enhancement

Works to to reduce processes/ manual effort and improve operational efficiency

What we cover (During the course):

- Custom AI Application (Design & Development)
- Prototype led hands on project delivery
- Integration with existing systems & workflows
- Staff training programs for responsible use
- Support pathways, maintenance and scalability

- **Free Warranty and Support**

(6 Months Post Delivery)
